

OPTIONS

WIRELESS

Options Wireless

Is an add-on program available for Options Software.

It provides an interface which integrates with Options in real-time to provide mobile data entry and enquiry facilities. Available on iPad™ or equivalent tablet via Remote Desktop.

Sales & Stock

- You can enter, search or scan a stock code to display description, pricing, available stock and image.
- Enquire on stock item sales history.
- Enquire on customer sales history for stock items.
- Make notes on stock items when visiting suppliers or browsing through a showroom.

Quoting

- Create new quotes wirelessly.
- Enquire or modify existing customer quotes.
- Generate and email a quote for a customer while sitting in their office.

Customer Orders

- Reduce time at point of payment by entering a customer's name and scanning their products while they are browsing the showroom floor or standing in queue at the counter.
- Sales reps on the road can search for and enter products into a customer order file which can then be loaded directly into the main Options system when they are back in the office.
- Enquire or modify existing customer orders.
- Convert a quote into a sales order.
- View customer order notes.

Supplier Orders

- Enquiry on supplier orders and order ETA information.
- Modify ETA information.
- View supplier order notes.

Receiving

- Users can receive purchase orders into the system from the wireless device by entering the purchase order number and then scanning or entering the stock items.
- Options Wireless will stop incorrect products being received against the purchase orders.
- If not all items are scanned in to be received, it will advise the user of any items not being fully received.
- Once the items are scanned in, they are updated into the Options System directly from the wireless device.
- Ability to print put away slips and stock/customer labels for the items received.

Put Away

- Scan items as they are being put away.
- Bin locations can be directly changed from Options Wireless to allow busy warehouses with product moving between bins to be managed more effectively.

Dispatching

- Users scan the sales order number and the products to be dispatched.
- Options Wireless will advise if a product being scanned is not available to be invoiced on the selected order - eliminating supply errors to customers.
- Items that aren't being dispatched will be displayed.
- Once the items are scanned the invoice can be generated and delivery labels printed.

Stock taking

- Wirelessly scan or enter stock items into the stock take counting file which is then imported directly into the main Options stock take entry module.

Highlights

Options Wireless has been rolled out at a number of our clients' sites with great success in providing data to user's fingertips on their devices and eliminating human errors by enabling direct scanning of items at multiple process points.

- Real time Interface to Options.
- Eliminate Human Errors.
- Available on any tablet via Remote Desktop.
- Full barcode support.
- Multiple barcodes per product.
- Printing Invoices, Put Away Lists and Labels directly from the device.

* Options Wireless requires a device compatible Bluetooth scanner and access to your wireless network or internet.
